

CONSCIOUS FOOD CHOICE FOR ATOPIC DERMATITIS

Daily Traits –

Atopic dermatitis is a chronic skin condition characterized by patches of dry, inflamed, and itchy skin. The exact cause of Atopic Dermatitis isn't well understood. One factor may be an overproduction of cells in your immune system that promote inflammation. Atopic Dermatitis often starts in childhood and tends to flare up periodically. During flare-ups, people with Atopic Dermatitis often scratch the affected area. This scratching can lead to more skin inflammation and make symptoms worse. Currently, there's no cure for Atopic Dermatitis. Treatment involves avoiding triggers, making lifestyle changes, and taking medications to ease symptoms.

→ Off Limits –

What you eat may not directly cause eczema, but it can trigger an increase in symptoms. This is especially true if you eat a food that you're allergic or otherwise sensitive to.

Common food allergies include:

- Eggs
- Nuts
- Gluten
- Cow's Milk
- Soy Products
- Fish / Shellfish

Foods containing preservatives, artificial ingredients and high in sugar may also exacerbate symptoms.

This includes foods high in trans fats, such as margarine, processed food, and fast food. Foods high in sugar may also trigger eczema flare-ups. Sugar causes your insulin levels to spike, which can result in inflammation.

Eating anti-inflammatory foods may help lessen or reduce eczema symptoms.

This includes:

• **Fatty fish**

such as salmon and herring. For vegetarians sources of Omega 3 -flaxseed, chia seeds and seaweed.

• **Foods containing quercetin**

Quercetin is a plant-based flavonoid. It's also a powerful antioxidant and antihistamine. This means it can reduce inflammation as well as levels of histamine in your body. Foods high in quercetin include:

-Apples, Berries, Cherries, Broccoli, Spinach Kale.

• **Mediterranean diet**

This diet emphasizes eating:

- Fruits
- Vegetables
- Fish

-Healthy fats, such as olive oil

It also includes red wine, which contains quercetin. Sugary desserts and red meat can be eaten in very small quantities or not at all in this diet.

• **Foods containing probiotics**

Probiotic foods, such as yogurt, contain live cultures that help support a strong immune system. This may help reduce flare-ups or allergic reactions. Probiotic-rich foods include:

- Sourdough bread, Miso soup, Kimchi
- Naturally fermented pickles, Kefir.

• **Anti-inflammatory diet.**

It places a strong emphasis on:

- Fruits, Vegetables,
- Whole grains, healthy fats,
- Fish, which are high in omega-3 fatty acids
