

Your 16 Day kit to fight infection and boost immunity. Restores cellular wellness and assists recovery.

Power packed with immune boosters, potent antioxidants and selective nutrients to protect against respiratory damage.

NUTRIENT	ACTION IN COVID PREVENTION AND TREATMENT
Colostrum	Mg, B-complex, vitamins A, C, E, growth factors IGF-1, IGF-2. Immunoglobulins, IgA, IgG, & IgM, ready to use passive immunity.
Lactoferrin	Binds the Heparan sulfate proteoglycans (HSPGs) preventing viral entry into the cells. Regulates iron metabolism, preventing virus replication.
Seaweed	ACE inhibitor peptides prevent virus spike protein from binding to the cells. Also inhibits cathepsin L, the lysosomal cysteine protease utilized by corona viruses to release RNA material inside the cells.
Curcumin	Disruption of viral envelope membrane proteins; inhibition of viral proteases that release RNA. Protects from pneumonia & ARDS by action against NF-kB, inflammasome, IL-6 trans signal & HMGB1 pathways.
Vitamin D	Vit D receptors (VDR) are expressed in B-lymphocytes, T-lymphocytes, monocytes & macrophages. Regulates innate & adaptive immune responses, inhibiting cytokine storm. Suppresses key pro-inflammatory NF-kB, IL-6, TNF. Can prevent loss of neural sensation in COVID-19 by stimulating expression of neurotrophins & Nerve Growth Factor (NGF).
N Acetyl Cysteine	Inhibits exudates in interstitial lung spaces, improving efficiency of oxygen exchange, decreases TNF- α , IL-1 β , IL-6, IL-8, IL-10, IL-17, & cytokine storm.

NUTRIENT	ACTION IN COVID PREVENTION AND TREATMENT
Vitamin E	Supports integrity of epithelial membranes, increases IL-2, NK cell activity, T cells proliferation & antibody response. Vitamin E & Selenium exhibit strong control over viral replication and mutation.
Zinc	Improves immune response, nucleic acid synthesis & redox homeostasis. Intracellular zinc impairs virus replication. Zinc deficiency enhances production of proinflammatory cytokines.
Selenium	Selenium deficiency & low antioxidants encourages pathogenic mutation of the virus. Selenium deficiency impairs functions of neutrophils, T cells, lymphocytes, NK cells & thymocytes.
Iodine	Iodide secreted in the surface liquid of the upper airway has antiviral effect. Direct exposure to iodine can destroy the virus.
Copper	Disintegrates the viral envelope & destroys the virus, also has anti viral effect by binding electron donor groups on viral proteins & nucleic acids.
Iron	Iron deficiency anaemia reduces immune response and increases susceptibility to viral infection. Iron reduces NF-kB nuclear translocation, promotes M2 & decreases proinflammatory M1 macrophage activity. Iron regulates cytokines via hepcidin, iron oxides disintegrate the virus lipid envelope by peroxidation.
Vitamin A	Antioxidant, main regulator of mucosal immunity, inhibits viral replication, promotes immune response, decreases morbidity & mortality.
Vitamin B-complex	Vitamins B1, B2, and B5 control host immune response through regulation of energy generation in immune cells. Down regulate proinflammatory cytokines & NF-kB, & activate macrophages.
Vitamin C	Vitamin C inhibits proinflammatory cytokines, like TNF and IL-6, promotes production of interferon, proliferation and migration of immune cells, enhances antibodies and complement proteins. Vitamin C is viricidal, in high doses.
